

LET'S TALK RENOVATION

Your property is your biggest investment.

So make sure you do what's needed to maintain its value.

Did you know that as a homeowner you're responsible for maintaining your septic system? A system that is not functioning properly can contaminate the groundwater, which is a source of drinking water. A faulty system can decrease the value of your home.

**Has your septic system reached the end of its useful life?
Have you found warning signs of a breakdown?**

If you've answered yes, it's time to replace it. But, with what?

Insist that your system be replaced by a permanent installation that protects the environment and your investment.

Choose
Ecoflo®

**Premier Tech
Environnement**

Ecoflo® is the installation most recommended to replace treatment systems!

Ecoflo® ensures the biological treatment and filtration of your wastewater and retains pollutants until they are completely degraded. It acts as an actual physical barrier that guarantees the longevity of the infiltration zone by **keeping the soil in place**.

Ecoflo® is a **permanent septic system**. In fact, after 8 years, only the filter media needs to be replaced, and there's no damage to your landscaping!

Ecoflo® continues to function even if there is a power failure. The treatment requires **no electrical energy**.

\$0/year * Less than \$10/year when a pump is required

Ecoflo® **lets you enjoy more of your lot** because of its small footprint. It is very flexible and can be installed on sites where most conventional systems available on the market cannot.

The septic system that increases the value of your property!

- A compact system that discreetly integrates into your landscaping
- Purification that protects groundwater and watercourses

Ecoflo® a septic installation that retains **98% of phosphorus!**

BNQ Certified

The results to prove it!

Parameters	12" in the soil under the Ecoflo®	12" in the soil and 10' downstream the Ecoflo®	Tertiary discharge criteria
Total nitrogen	8 mg/L	6 mg/L	10 mg/L
Phosphorus	≤ 0,5 mg/L	≤ 0,2 mg/L	1,0 mg/L
Fecal coliforms	< 10 CFU/100mL	< 10 CFU/100mL	200 CFU/100mL
